

SEA AND LAND-BASED AQUACULTURE SOLUTIONS

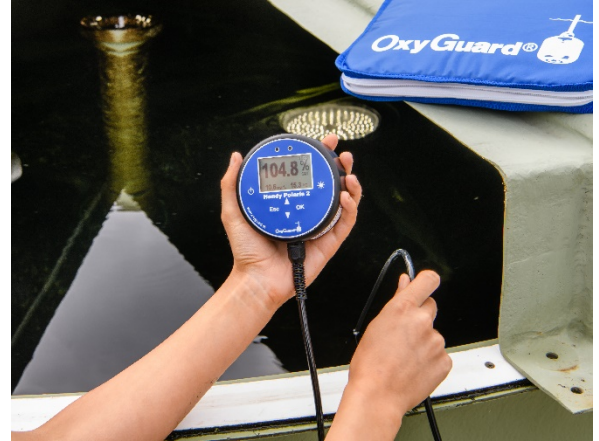

OxyGuard is the world's leading manufacturer of measuring, monitoring and control equipment for all types and sizes of fish farms.

Ease of use, reliability and the introduction of innovative devices have made OxyGuard equipment the first choice of discerning fish farmers since fish farming became an industry.

HANDY INSTRUMENTS

Hand-held instruments are ideal for spot measurements in many places and ponds. The use of Handy will help you know what is happening and optimise conditions.

OxyGuard offers a wide range of hand-held instruments for measuring different parameters, such as dissolved oxygen (DO), salinity, CO₂, total gas pressure (TGP). All of them are extremely reliable and easy to use.

PACIFIC

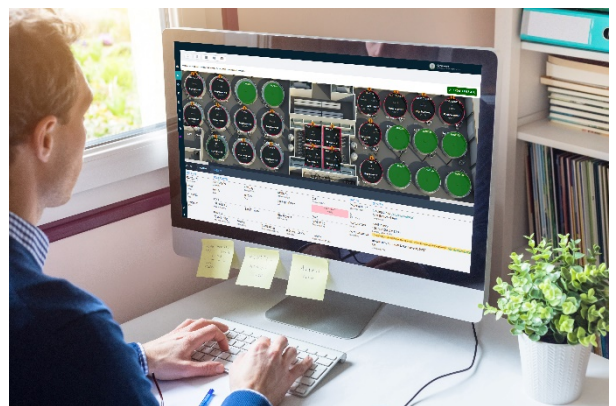

State-of-the-art measuring, monitoring and control system for fish farm.

OxyGuard software/hardware concept allows us to configure the system to precisely match your requirements, using preferred combination of units. Additional units, for system extension, can be purchased as required - and simply installed. In this way, your investment is securely protected as your measuring, monitoring and control platform expands along with your needs!

COBÁLIA

COBÁLIA is an advanced farm management platform that enables you to control and evaluate every part of your production.

The farm management system will keep track of daily, monthly and yearly tasks, autogenerate reports for authorities, keep track of inventory and give a complete visual overview of the conditions on your farm.
